

Synchronizing with the GNOME desktop

The [GNOME desktop](#) has built-in support for Nextcloud's calendar, contacts and tasks which will be displayed by the Evolution PIM or the Calendar, Tasks and Contacts app as well as for files, which it integrates into the Nautilus file manager via WebDAV. The latter works only while the computer is connected.

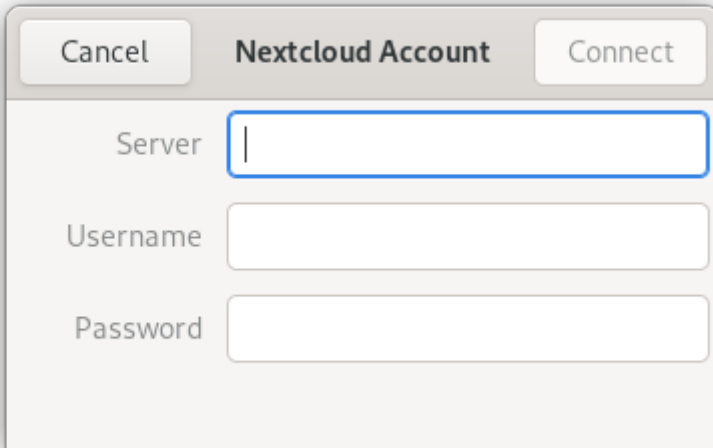

This can be done by following these steps:

1. In the GNOME settings, open Online Accounts
2. Under "add an account" pick Nextcloud.

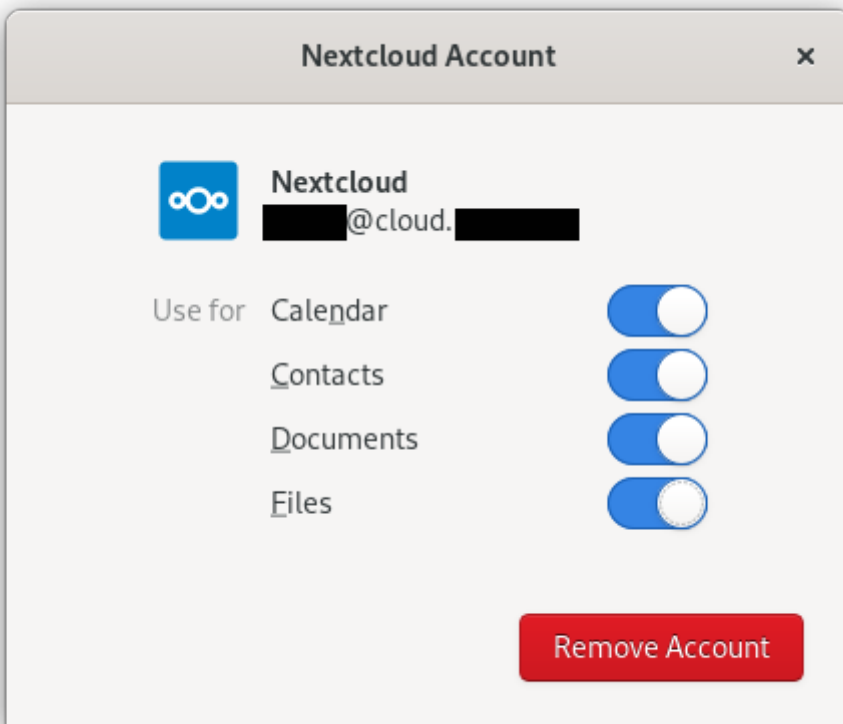

3. Enter your server URL, username and password. If you have enabled two factor authentication, you need to generate an app-password/token, because GNOME Online

Accounts [doesn't support Nextcloud's webflow login yet](#). ([Learn more](#)).

A dialog box titled "Nextcloud Account" with "Cancel" and "Connect" buttons. It contains three input fields: "Server" (with a blue border and a cursor), "Username", and "Password".

4. In the next window, select which resources GNOME should access and press the cross in the top left to close.

A dialog box titled "Nextcloud Account" with a close button (x) in the top right. It displays the Nextcloud logo and the text "Nextcloud" followed by a redacted email address "@cloud.". Below this, there are four toggle switches for "Use for": Calendar, Contacts, Documents, and Files. All four toggles are currently turned on. At the bottom right, there is a red button labeled "Remove Account".

Nextcloud task, calendars and contacts should now be visible in the Evolution PIM, the task, contacts and calendars app.

Files will be shown as a WebDAV resource in the Nautilus file manager (and also be available in the GNOME file open/save dialogues). Documents should be integrated into the GNOME Documents app.

All resources should also be searchable from anywhere by pressing the Windows key and entering

a search team.
